

ENERGY POLICY

As a responsible packaging manufacturer;

In order to protect our planet and life, we are aware of the necessity of using all energy resources effectively, and we are working to increase energy efficiency based on sustainable development. Depending on the national and international energy legislation, standards and other conditions that we are subject to; We aim to develop and continuously improve our energy performance by using our knowledge and all necessary resources.

In line with this goal we are;

- Developing projects that will provide energy efficiency by following technological studies and adapting them to our current systems
- Applying environmentally and energy-friendly technologies in our new projects, design studies and equipment purchases
- Continuously improving our energy performance with the design and supply of products, processes and services with high energy efficiency
- Ensuring continuous development of our employees whose education, experience and awareness on energy efficiency are increased with the understanding of a management that is open to communication.
